DATA INCLUSIONS AND LIMITATIONS: Data sources often differ in what is included or excluded. The following are guidelines for the data used in this report. The fact that various export studies report different numbers is often explained by whether or not it includes or excludes some of the following items or trade patterns.

1. Shipments between the 50 states, Puerto Rico, and U.S. island possessions (Virgin Islands, Guam, etc.) are exluded from the data on which this report is based.

2. Shipments in transit from one country to another through the U.S. are excluded.

3. Shipments to U.S. Armed Forces and Diplomatic Missions abroad for their own use are excluded.

4. Shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act) and P.L. 87-195 (Act for International Development) are included.

5. Agricultural commodities covered in this report consist of nonmarine food products and agricultural products that have not passed through complex manufacturing processes. Raw hides and skins, vegetable and animal fats and oils, and unrefined wines are included. Such manufactured items as textiles, leather, boots and shoes, baked goods, and distilled alcoholic beverages are not included.

6. Both the California Crop and Livestock Reporting Service and the U.S. Department of Commerce are constantly updating and revising data. The most recent available revision was used at the time of the assembly of this report, June-September 1985.

INFORMATION SOURCES: The following is a list of major sources used in this report.

U.S. Department of Commerce, Bureau of the Census, Foreign Trade Division data series EA622, U.S. Exports, Schedule B Schedule by Schedule B Number by Unit Control by Country of Destination by Customs District of Exportation by Economic Class and Method of Transportation, available on magnetic computer tape.

U.S. Department of Agriculture, Agricultural Statistics, 1984.

U.S. Department of Agriculture, Economic Research Service, Foreign Agricultural Trade of the United States, 1984.

Statistics Canada. Import data from customs records obtained on special order tape.

Agriculture Canada. Annual Unload Report - Fresh Fruits and Vegetables on 12 Canadian Markets.

U.S. Department of Agriculture publications: Foreign Agriculture, Foreign Agriculture Circulars, Outlook for U.S. Agricultural Exports, Agricultural Outlook, and periodic releases of the Crop Reporting Board.

Federal/State Market News Service Publications. Frequent market reports sometimes include exported commodities.

Marketing Organizations and Individuals. Many people supplied opinions and information about the commodities with which they are professionally involved. We wish to thank all those who contributed their expertise.

INTRODUCTION: This 1984 estimate of California's agricultural exports is being published in two sections: (1) the Annual Bulletin and (2) a Statistical Appendix. This makes Table 1-5 of the export report available separately from the Statistical Appendix that contains tables of commodity shipments by country of destination and tables showing all agricultural commodities shipped to selected countries.

Using a calendar year basis complicates comparisons of exports to crop data with varying crop or marketing year cut-off dates. Where crops are harvested late in the year and marketed throughout the following year (e.g. cotton, almonds), the comparisons shown are with the production of the preceding year. Please note footnotes to Table 3 to ascertain whether this delayed comparison system has been used.

The comparisons of both California and U.S. crop values to exports in Table 3 are calculated using average farm level prices at the state and national level. Since exported produce is often of higher than average quality and may represent off-season high value produce in some categories, the use of average prices probably underestimates the value of the exported portion of the crop.

Farm values and quantities used to compare exports to the total crop were taken from existing publications of the California Crop and Livestock Reporting Service and the U.S. Department of Agriculture's Statistical Reporting Service published material. Conversion of commodities from export form to farm production units was done using Statistical Bulletin No. 616, Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products. Table 5 comparisons between California and U.S. total exports are done solely on export values.

The Statistical Appendix containing Tables 6 and 7 is published separately from the current bulletin. In the commodity by country tables, both U.S. and California port data are shown for most agricultural commodities that appear in Table 5. In Table 7, selected U.S. agricultural exports, the portion moving through California port districts, and a separation between sea and air shipments are shown by country. The 25 leading markets for U.S. agricultural products are included.

The final estimates of California's agricultural exports in this bulletin were made using the port data, information from the Canadian government on unloads of fresh fruits and vegetables, and by contacting representatives of commodity groups, exporters, and handlers to obtain their opinions. Each commodity was treated separately and the estimate was made on the best available information. It should be emphasized that these are estimates since exact data are not available.

1/ Commodity list extended to include 32 products in 1984. Safflower and kiwifruit are shown separately for the first time.

HIGHLIGHTS OF CALIFORNIA'S AGRICULTURAL EXPORTS
CALENDAR YEAR 1984

TABLE 1

A continued decline in California's agricultural exports was recorded in 1984. The $2.9 billion value of the State's farm and ranch products going into international trade is 5% lower than 1983, a slower decline than the past two years. Almonds led the products that gained in 1984 with a $72 million increase, 30% over the 1983 value. Wheat and cottonseed recovered from dramatic drops the year before and onions, flowers and nursery products and most of the fresh fruits and vegetables also gained.

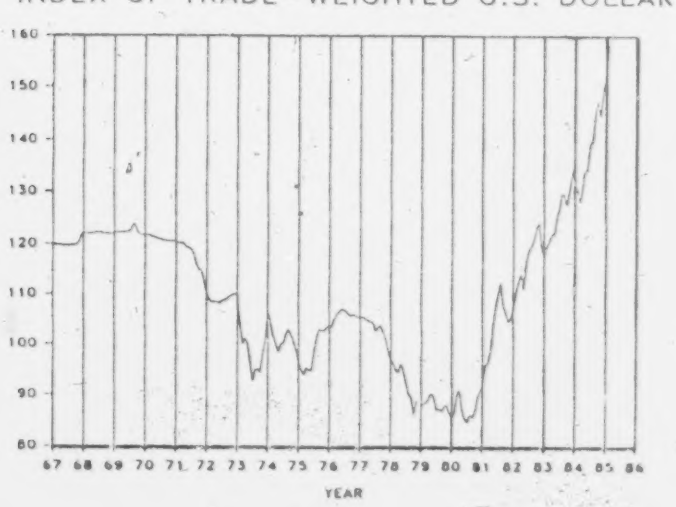
Offsetting these increases was a 27% decrease in cotton exports, a drop of $234 million in California's leading export product. Citrus, grapes, rice, alfalfa, tomatoes, peaches, and pears also dropped.

No one explanation fits all products but the high value of the dollar continues to make our products expensive abroad. For example, the price paid for almonds by the British consumer has doubled between 1980 and 1985 while the price to the grower has dropped. (See chart below).

Trade barriers are an explanation for slow growth in some markets and products. The Japanese tax of $4 per gallon on wine, 25% on the value of beef and 40% on oranges between December and May together with quotas, a ban on rice imports, and a costly distribution system make sales of some of California's leading products difficult in our best market. A pound of tenderloin from California ranches can cost the Japanese consumer $16 or more.

As the chart inside the front cover emphasizes, the Pacific Rim is California's leading outlet for agricultural products and rising incomes there will lift demand for higher value imported foods. Currently only 10% of the U.S. agricultural exports are in the high value and value added categories. If this could be raised to 15% it would add 500,000 new jobs. Because many of California's products are in these high value categories a large portion of this increase could be realized by the Golden State.

The need for a reversal of the trade decline is shown below. The agricultural trade balance is now about half its 1981 peak level.



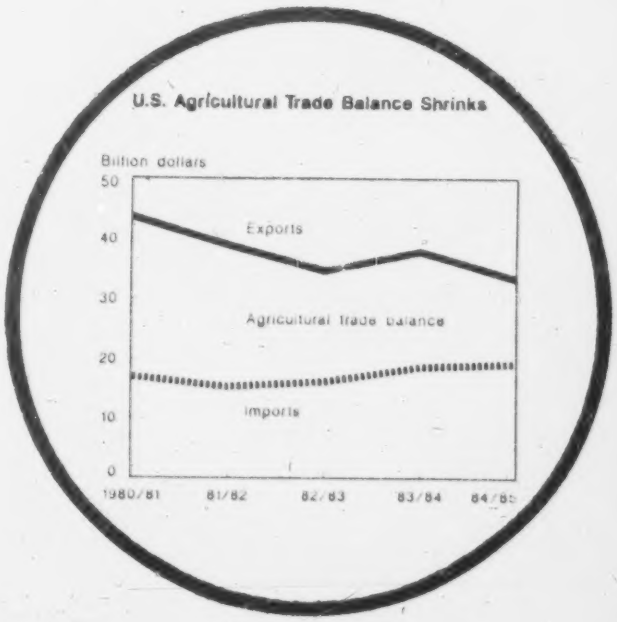


TABLE 2. CALIFORNIA'S AGRICULTURAL EXPORT PROFILE 1984

CALIFORNIA'S AGRICULTURAL EXPORT PROFILE, 1984

TABLE 2

International trade's importance to California's ranchers and growers continues even with a decline in the value of our exports. Table 2 shows three measures of this importance:

(1) The farm level value of exports as a percentage of the value of production - a measure that ranges from 71 percent of cotton lint to less than 2 percent for processing tomatoes, potatoes, and turkeys.

(2) California's portion of U.S. agricultural exports - in 15 crops we provide 95-100 percent of the U.S. exports and we produce 7.7 percent of all U.S. agricultural exports.

(3) The acreage needed to grow produce for export - 1.86 million acres represents 21 percent of California's cropland harvested in 1984. This estimate is based on State average yields and is reduced from the 1983 level by the drop in cotton and citrus exports.

Leading our exports are:

Cotton - Still our most valuable export, but with increased competition abroad and greater domestic sales during 1984, California exports have declined. Acres producing cotton for export dropped from more than a million in 1983 to 822,000 in 1984.

Almonds- The number two ranked crop for agricultural export increased its sales abroad in 1984 by 30 percent. Commercially grown exclusively in the Golden State, the market abroad has been developed to purchase more than half the crop and this requires an estimated 140,000 acres calculated at 1983 average yields due to the lag between harvest and sale. Because of the calendar year approach to exports, this estimate varies from the almond industry's marketing year data.

Oranges- Orange exports declined 10 percent in 1984 due to a smaller crop. California dominates the fresh orange market with high quality Navels during the winter and Valencias throughout the summer but with the 1983-84 crop being only 63.5 percent of the 1982-83 crop, a smaller amount was available for export. Our orange growers still counted on international markets for selling one-fourth (24.1 percent) of their crop.

Grapes - Value declines in all categories (fresh, dried, and crushed) were registered in exports of the products of California's vineyards even though tonnage remained at the same level. The strong dollar made competition with Mediterranean products (French, Italian, Portuguese, and Greek) more difficult throughout the world markets. An 8 percent drop in value of exported grapes and grape products is the result.

Rice - The rice industry in California lost the gains made in 1983. This is still half of the U.S. rice exports (49.2 percent) and its production required 155,710 acres when calculated at average yields.

TABLE 3. CALIFORNIA'S PRINCIPAL CROP AND LIVESTOCK COMMODITIES ESTIMATED FARM VALUE OF PRODUCTION AND COMPARABLE FARM VALUE OF EXPORTS WITH COMPARISON TO U.S. TOTAL, 1984

1/ 1984 exports compared to 1983 crop due to lag in time of sale after harvest.
2/ Compared to an average of the 1983 and 1984 crops.
3/ Includes nectarines due to joint classification number assigned at port of export.
N/A Not Available.

COMPARISON OF CALIFORNIA'S AGRICULTURAL PRODUCTION WITH ESTIMATED EXPORTS

TABLE 3

The farmgate value of exports is shown in Table 3 and is compared to total State production as estimated by the California Crop and Livestock Reporting Service or the Summary of California County Agricultural Commissioners' Reports. This farmgate value comparison is made using quantities exported valued at State average prices and varies significantly from the value declared at the port of embarcation used in Table 1. In some products, the high quality selection process and special packing required for overseas markets augments the value considerably. A comparison of California to U.S. exports is computed on the same basis: valuing exported quantities at National average farmgate prices.

Calendar year export data do not coincide with the varying harvest periods and marketing years of California's diverse production. In noted cases, the comparison of exports to production is made with the previous calendar year's crop since considerable delay is encountered in shipping products harvested late in the year.

FIELD CROPS

Cotton remains the major agricultural product exported from California's farms and ranches with 7 out of 10 bales being sold abroad. Exports declined and the strong dollar, increased competition from Mainland China and more domestic use of California's premium cotton were instrumental in this downward trend.

While rice exports declined by 27 percent, California wheat sales abroad increased by 18 percent, both changes in the opposite direction from 1983. Exports of alfalfa hay in cube form and alfalfa seed both dropped in the face of the strong dollar and competition, for example, from supplies in Canada that enjoy low energy costs for drying and a goverment subsidized transporation system.

FRUIT AND NUT CROPS

Almond export volume gained 24 percent in 1984, illustrating that some products continue to enjoy demand abroad. The percentage of oranges going overseas remained at 24 percent but a considerably smaller crop led to a decline in export volume of 21 percent. Higher prices meant the value declined only 11 percent. Lemons, grapes, prunes, peaches, and pears declined in value exported following the general trend. Avocados, figs, plums, and strawberries gained in export value between 1983 and 1984. Walnuts showed the effects of a lower price. The quantity exported rose but the farm value was less than the previous year. Kiwifruit has been added to the list this year since they have been assigned their own export category number.

VEGETABLES, FLOWERS, AND BERRIES

Onions, lettuce and tomatoes remain the volume leaders among vegetables going into international trade. Asparagus, broccoli, carrots, cauliflower, and strawberries gained export value, reflecting increased sales to Canada.

LIVESTOCK AND POULTRY

Estimating the quantity and value of livestock products being exported and comparing this to a farm value is complicated by the variety of products reported - hides, tallow, offal, meats, and live animals, for example. Also, the valuations assigned to dairy products donated to foreign nutrition programs from U.S. government stockpiles do not reflect their market value.

Exports of poultry and poultry products declined again although the change was relatively small. Increasing competition in the Far East from Mainland China and the failure to sell in the Middle Eastern markets due to the stronger dollar and increased competition from European sources are among the factors contributing to these declines.

CHANGES OVER SIX YEARS

TABLE 4

Changes in value of California's exports of selected leading commodities and the total exports over the six-year period 1979-1984 are shown in Table 4. The value in 1984 has returned to within 4 percent of the 1979 level. A wide variation exists between commodities: strawberries and oranges have more than doubled while the 1984 cotton and rice are at their lowest levels in the entire period. The peak for most commodities was in 1981. No adjustments have been made in these values for inflation.

TABLE 4. VALUE OF EXPORTED COMMODITIES PRODUCED IN CALIFORNIA, 1979-84

CALIFORNIA'S SHARE OF THE NATION'S AGRICULTURAL EXPORTS

TABLE 5

California's estimated agricultural exports for calendar year 1984 are presented in Table 5 on an individual item basis. U.S. total agricultural exports of each item are also shown, and the share of the Nation's exports produced in California is calculated using this data. The results are not always in agreement with the USDA production share approach to estimating each state's portion of U.S. exports. The total in Table 5 is about 10 percent over the California total calculated using the production share approach. The difference is less than earlier due to the National total gaining 8 percent and California's estimate declining by 5 percent. The estimated values in Table 5 are based on port declarations and include freight, insurance, and port charges. These values are notably different from the farmgate values shown in Table 3.

Using these port values, California exported about 8 percent of total U.S. agricultural exports in 1984. While California produces about half of the Nation's total fruits and nuts, 78 percent of the exports of these commodities come from the Golden State. The total U.S. export value is heavily weighted with commodities such as soybeans and tobacco that are not produced in California. Among the State's crops, there are 29 where more than half of the total exported from the U.S. comes from California. Of these, eleven are 100 percent from California including almonds, apricots, dates, figs, raisins, olives, kiwifruit, pistachios, prunes, walnuts, and garlic.

To arrive at the estimates in Table 5, each selected commodity was individually studied. For some that are grown only in California, the National export data are immediately applicable. For others that are produced in states outside California, modifications are made using California port data and opinions and information from commodity traders and exporters. Additional information on shipments of fruits and vegetables to Canada was obtained from the Canadian government.

Only when California grown products are not easily identifiable (hides and skins, tallow, meats, and poultry, for example) is the California share of U.S. production* used in estimating the portion of U.S. exports produced in California. This system is also used to calculate the "all other" category using factors obtained from the Economic Research Service of the U.S. Department of Agriculture. The factors were calculated for 15 groups of commodities not listed separately in Table 5 and applied to the U.S. totals that are shown in Table 8 of the Statistical Appendix to this bulletin.

In the graph below, the U.S. total agricultural exports are shown as projected to 1986. To avoid the trend of further declines in agricultural exports California producers and marketers need to demonstrate a long term committment to selling California's unique products abroad.

INTRODUCTION: The publication Exports of Agricultural Commodities Produced in California is published in two parts: an Annual Bulletin and a Statistical Appendix. The Annual Bulletin provides a review of data and information sources, the value and quantity for California's major agricultural export items with year-to-year comparisons, farm value, acreage required to produce selected agricultural exports, and comparisons of California exports to those of the nation. The Statistical Appendix provides detail on value and quantity of exports of agricultural goods that are of interest to California. Detail on commodity movement to specific markets is provided by country with commodity detail, and by commodity with individual country detail. Statistics on the method of shipment, either air or vessel, are also presented within the country detail tables. All dollar amounts represent the value of the product as it arrives at the port of exportation including transportation, insurance, and other costs (c.i.f. port of export). Costs incurred beyond the U.S. port of exportation are not included.

Port district statistics reflect total shipments of the item through the port district, without consideration of the point of origin of the commodity within the United States. Therefore, individual users of this data must apply their own knowledge of trade patterns to determine the portion of a specific product that originates on California farms and ranches. Products moving to Canada from California are rarely reflected in the California port district statistics. Additional information on trade with Canada is available from the Federal-State Market News Service and Agriculture Canada, referenced in the Annual Bulletin.

Table 6 provides commodity information by destination, with total U.S. exports and movement of the goods through the California port districts. Over 150 agricultural products are presented. Three new product categories are reported for the first time this year: fresh kiwifruit, jojoba oil, and safflower oil.

Table 7 shows exports to 25 countries based on the total value of U.S. exports in over 400 separate agricultural commodities. Commodities are presented in numeric order based on the Bureau of Census Schedule B Classification. Statistics include total quantity and value exported from the U.S. and the California ports, and gross quantity and value of air and vessel shipments. The total of air and vessel quantity statistics may exceed those for the port districts since these 'method of transportation' columns reflect gross weight, rather than the net weights shown in the U.S. and California Port District totals. Users are again cautioned to avoid assuming that all product movement through the port districts reflects production occurring in California.

The final table, Table 8., lists products that are not treated individually in Table 5 of the Annual Bulletin. Commodities that are not produced commercially in California have been excluded, so the totals presented do not coincide with similar lists published by the Foreign Agricultural Service.

Additional details on exports of other commodities of interest to California or on shipments to countries not included in this report may be obtained on a request basis from the Agricultural Statistics Branch, 1220 N St., Room 243, Sacramento, CA 95814.

NOTES TO THE STATISTICAL APPENDIX

SOURCE: The tables in this appendix were prepared from data extracted from the U.S. Department of Commerce, Data Tape EA622, U.S. Exports, Schedule B Schedule by Schedule B Number by Unit Control by Country of Destination by Customs District of Exportation by Economic Class and Method of Transportation.

Table 6: "Agricultural Exports: U.S. and California Port District Totals" summarizes data for 1984 exports of over 150 agricultural products by destination.

1. "California Ports Quantity" is net units of product at the port of exportation.

2. Countries with purchases of less than $5,000 of a specific commodity are totaled and included as "Other".

3. The sum of all individual country values for a commodity may differ from that presented under "Total" due to rounding.

4. Statistics for California port districts should be applied carefully since value and quantity for products shipped from California ports could include production originating in other states.

Table 7: "1983 Annual Exports by Country" details exports to 25 countries, selected by the total value of their U.S. purchases of 400 agricultural products of commercial interest to California.

1. Individual commodities are ranked within each country by the total U.S. purchase value of the commodity.

2. "U.S. Total Quantity" and "California Ports Quantity" are net quantity at the port of exportation.

3. "Vessel Quantity" and "Air Quantity" are gross weights at the port of exportation, and may total more than "U.S. Total Quantity" or "California Ports Quantity".

Table 8: Other Agricultural Commodities Exported thru U.S. and California Port Districts provide supplementary data for the commodities not included in Table 5.

1. A modified production share approach was used in calculating the contribution of these commodities to California's agricultural exports, as explained in the introduction to Table 5 in the Annual Bulletin.
